## UVA Lee Street Connective Elements

### MCM Copper Barrel Roof

The Lee Street Connective Elements project includes a new bridge over Lee Street between the University Hospital and the East Parking Garage. CAP Industries, Inc. manufactured and supplied the MCM Copper Barrel Roof and ACM White Composite Panels that form the curved elevated connector and the ACM panels on the adjacent buildings. The Copper underside and either end further accent the Connective Element.

Designed by [Zimmer Gunsul Frasca Architects LLP](#) and Installed by Glass & Metals, Inc. of Harrisonburg, VA.

The Copper Barrel Roof hides piping and mechanical equipment. Rubber gasketing was installed between the curved copper panels to complete the finished look while allowing future access for maintenance. The shiny copper panels will eventually, in a matter of months begin to develop a dull dark patina.

The project ties together the Emily Couric Cancer Center project and the hospital Bed Expansion project, allowing a unified sense of place and a new point of arrival with a plaza/traffic oval for better vehicular flow and controls the increased usage that results from the addition of these two projects.

Columbia Architectural Products, Inc. manufactures a wide variety of architectural panel products and other interior and exterior building materials, servicing our customers' needs since 1983.
